

Appendix 2 - Annex A

Below are the conditions for the movement of plants with soil or soil-related matter attached out of a Japanese beetle regulated area in British Columbia (BC) of the [Phytosanitary Requirements to Prevent the Spread of Japanese Beetle, *Popillia japonica*, in Canada and the United States \(D-96-15\)](#).

A log must be kept of all movements that are allowed under the associated movement certificate (log template will be provided by the CFIA).

For plants with soil or soil-related matter (i.e. regulated articles) attached (year-round):

- All regulated articles being transported outside of a regulated area must be secured and safeguarded within the conveyance to prevent the escape of Japanese beetle.
- The conveyance must proceed directly to the **Metro Vancouver Landfill** at 5400 72 St, Delta, BC V4K 3N3, where all the regulated articles must be unloaded for deep burial.
- At the landfill, the conveyance must be carefully emptied and swept, where possible, so as to remove all regulated articles for deep burial.
- All equipment, tools and articles of clothing exiting a regulated area that have come into contact with regulated articles must be cleaned free of regulated articles at the landfill site before leaving.
- **No other articles are regulated.**
